Environments Managed via GitOps

About

Building scalable cloud infrastructure that drives business value

Cloud & DevOps leader with 8+ years building and running infrastructure at scale, now owning Cloud, DevOps, Data Engineering and IT Operations end-to-end for a Singapore-HQ fintech. Track record of turning cost, reliability, and delivery into measurable outcomes — $90K+ in annualized cloud savings, 99.99% availability, and GitOps-driven automation that replaced manual, error-prone operations. I set the technical direction, raise the engineering bar through standards and review, and lead distributed teams to ship safely. Deep hands-on command of AWS, Azure, Kubernetes, Terraform, Argo CD, and serverless.

Team Leadership

Lead 5-engineer distributed teams across multiple timezones — hiring bar, mentoring, and on-call culture

Technical Direction

Set the cloud, GitOps, and IaC standards; drive architecture and design reviews end-to-end

Business Impact

Own FinOps and reliability as outcomes — $90K+ saved annually at 99.99% availability

Safe Delivery

Replaced manual production operations with reviewed, auditable, automated workflows

Experience

Progressive career in cloud infrastructure and DevOps leadership

AUG 2025 – PRESENT

Associate Director – Cloud, DevOps, Data & IT Operations

Olea Global Pte. Ltd, Singapore (Remote from Hyderabad)

- Own the cloud, DevOps, data engineering and IT operations function end-to-end for a Singapore-HQ fintech, leading a 5-engineer distributed, multi-timezone team
- Led cost optimization achieving $90K+ annualized savings ($7,500/month validated reduction) through FinOps governance, right-sizing, and Savings Plans
- Established a GitOps operating model with Argo CD, making cluster state declarative, reviewable, and auditable across dev/preprod/prod
- Built automated Terraform drift detection as an Argo CD-managed Kubernetes CronJob across all environments, with tiered alerting that separates real infrastructure drift from noise and reports to GitHub/Jira
- Re-architected the data-patch pipeline to a safe, auditable model — a reviewed/merged Git PR triggers an ephemeral Kubernetes Job that runs the change in a single transaction with automatic rollback, verification assertions, and a full audit trail (replacing a legacy always-on runner)
- Deployed Langfuse AI observability platform on EKS — first AI/ML tooling in the organization
- Built an automated certificate renewal system (Lambda + Microsoft Graph API) deploying SSL certs to 22 Azure AD applications
- Implemented pod-restart and service-health alerting with automatic Jira ticket creation (Prometheus → Alertmanager → custom webhook)

- Architected a QuickSight Cost Intelligence dashboard on Athena & CUR 2.0 for executive cost visibility
- Authored 15+ reusable Terraform modules across dev/preprod/prod as the team's IaC standard
- Built CloudWatch log-archive automation (Lambda + Step Functions + S3 Glacier lifecycle) and an automated RDS refresh pipeline (Step Functions)
- Set engineering standards and review practices for OS patching automation, FinOps governance, and infrastructure compliance

JAN 2024 – AUG 2025

Cloud Operations Engineer

Tango Analytics, Dallas TX, USA (Remote)

- Led a 5-engineer team, owning CI/CD modernization that improved deployment efficiency by 40%
- Architected AWS infrastructure delivering 99.99% availability and cutting downtime by 30%
- Ran ECS Fargate workloads with blue-green and canary release strategies for safe, zero-downtime deploys
- Implemented Security Hub, GuardDuty, and SOC 2 / GDPR compliance controls across the estate

SEP 2023 – JAN 2024

Senior Site Reliability Engineer

Gemini Intergalactic Pvt Ltd, Gurugram

- Led a cloud migration to Kubernetes and introduced SRE practice (SLIs/SLOs, error budgets) to the team
- Automated infrastructure with Ansible across AWS & Azure, eliminating 80% of manual configuration
- Stood up centralized logging on the ELK Stack, cutting logging costs by 30%

JUL 2019 – SEP 2023

DevOps Engineer

Infinity Infra, Hyderabad

- Spearheaded cost optimization saving ~$50K annually across cloud workloads

- Built CI/CD pipelines (Jenkins, GitHub Actions, Docker) that cut deploy time by 60%
- Managed Terraform / CloudFormation across 10+ environments as infrastructure-as-code standard
- Delivered full-stack observability with Prometheus, Grafana, and the ELK Stack

JUL 2017 – JUL 2019

Operations Engineer

Wells Fargo EGS, Hyderabad

- Administered a 200+ Linux server estate at 99.9% uptime in a regulated banking environment
- Cut MTTR by 50% through stronger incident management and runbook automation
- Built Nagios/Splunk monitoring that reduced unplanned outages by 35%

Technical Skills

Deep expertise across cloud, automation, and operations

Cloud Platforms

AWS (30+ services), Azure, GCP

Infrastructure as Code

Terraform, CloudFormation, Ansible, Step Functions, EventBridge

CI/CD & Automation

Jenkins, GitHub Actions, CodeBuild, CodeDeploy, CodePipeline

Containers & Orchestration

Docker, Kubernetes, EKS, ECS Fargate, Helm

GitOps & Delivery

Observability

Argo CD, Kustomize, GitHub Actions, trunk/PR-based workflows, progressive delivery

Prometheus, Grafana, ELK Stack, CloudWatch, Azure Monitor

FinOps & Cost Management

Cost Explorer, CUR 2.0, QuickSight, Budgets, Savings Plans

Scripting & Languages

Python, Bash/Shell, HCL, SQL

Security & Compliance

Security Hub, Config, IAM, SOC 2, GDPR, ISO 27001

Data & Serverless

Lambda, Glue, MWAA, Athena, DynamoDB, SNS/SES

Get in Touch

Open to discussing cloud architecture, DevOps strategy, and leadership opportunities
